

Task 3: Design System & Component Library

Goal

Create a modular design system for the "LancerFlow" application to ensure consistency and scalability in UI design.

1. Design Tokens

- **Colors:** Primary Blue (Main actions), Dark Neutral (Text), Light Neutral (Backgrounds/Surface).
- **Typography:** Heading 1 (32px) for hierarchy, Body Text (16px) for readability.

2. Component Library

Components were created with variants to handle different interactive states:

- **Primary Buttons:** Default and Hover states for clear user feedback.
- **Input Fields:** Designed for data collection and email capture.
- **Feature Cards:** Standardized containers to showcase service benefits.

3. Usage Guidelines

To maintain consistency across the LancerFlow platform:

- Use the Primary Color specifically for high-priority calls-to-action.
- Apply Heading 1 for section titles to maintain clear visual structure.
- Switch button states (Default/Hover) consistently across all interfaces to provide immediate feedback.
